

TIPS FOR USING THE

Intersection of Clarence Avenue and Main Street

ON FOOT

Pedestrians can now cross both sides of Clarence Avenue.

Press or wave at the pedestrian push-button to activate the pedestrian signal.

The crossing sounds and vibrating arrow are activated by pressing or holding your hand in front of the push-button for about three seconds.

Wait until all traffic has stopped and you see a "WALK" light, hear the crossing sounds, or feel the arrow vibrate.

Proceed with caution.

When you see a flashing orange hand, the crossing sounds have stopped, or the arrow has stopped vibrating, do not enter the crossing.

If you are already in the intersection, finish the crossing.

IN A CAR

On Clarence Avenue:

Obey the red-amber-green signals as you would at any other signalized intersection in the city.

The signal will only change from green when a pedestrian or a cyclist activates the crossing.

On Main Street:

Drivers can only turn right at the intersection.

Always come to a complete stop at the stop line, watch for breaks in traffic and proceed right only when it is safe to do so.

ON A BIKE

Come to a stop in the bike box.

Press or wave at the cyclist push-button to activate the pedestrian signal.

Wait until all traffic has stopped before you begin crossing.

Ride through the intersection, but always watch for traffic and proceed with caution.
